

Everything DataSF Returns for “Planning”:

A catalogue of the portal, and what in it the pipeline does not yet use

Dan Post

September 2026

Abstract

The data-acquisition memo went to DataSF with a list of datasets it wanted. This memo goes the other way: it asks the portal’s catalogue for everything matching “planning” and records what comes back, so that nothing useful is missed because nobody thought to ask for it. Retrieved 2026-09-11.

The catalogue returns 273 assets, and the site’s figure of 155 matches its datasets alone. The Discovery API counts 155 datasets, 78 maps, 22 filtered views, 13 external links, 2 stories, 2 files and 1 chart; most of the 118 that are not datasets are map views and filtered views of datasets. Two facts about the API are worth recording because both produce silently wrong answers: paged in its default relevance order it returned 273 rows holding only 261 distinct assets, and the old host name `data.sfgov.org` is *not* a dead end — passed as `search.context` it returns 273 results, the same assets as the new one.

There is still no dataset of Commission actions, published or unpublished: not in the 273 results, and not among the Planning Department’s 109 entries in the city’s own dataset inventory. The conditions memo’s negative stands.

What the pipeline is not using. 82 assets are flagged, by judgement, as core or possibly useful and are not cached. The two that matter most are delay data nobody has measured against: the Planning Department’s record-level review-time metrics, keyed on the Accela record number, and DBI’s station-by-station permit routing, which dates every review step including Planning’s. A newer publication of the current zoning layer also exists beside the one the zoning panel carries forward.

4 Negatives	42
5 Established, and not established	42
6 Reproducing this	42

1 The query, and why the count is not 155

The brief records that the portal’s own search reports 155 results for “planning”. The Socrata Discovery API, asked the same question with the domain set to `data.sf.gov` and paged to exhaustion, returns **273**. Table 1 reconciles the two by asset type: the API’s own facet count for datasets is 155, and when the full result set is paged in a stable order the assets typed “dataset” are exactly those 155. The site’s figure matches that datasets count, and the other 118 results are 78 maps, 22 filtered views, 13 external links, 2 stories, 2 files and 1 chart.

That reading is *consistent with* the number the brief reports and has not been verified against the page itself: the portal’s search is a JavaScript application whose count is filled in after the page loads, and no JavaScript engine was available to render it. What is verified is the API’s side of the equation, type by type.

Table 1: The catalogue’s answer to `q=planning`, by asset type. ‘Facet’ is the API’s own count with `only=` set to that type; ‘results’ counts the assets returned when the full result set is paged in a stable order. The two agree type by type.

Asset type	Facet count	Results
dataset	155	155
map	78	78
filtered view	22	22
external link	13	13
story	2	2
file	2	2
chart	1	1
All		273

Table 2: Which parameter names the host decides what the catalogue returns. Each row is the same query, `q=planning`, with the host passed differently.

Query	Results
<code>domains + search_context = data.sf.gov</code>	273
<code>domains + search_context = data.sfgov.org</code>	273
<code>search_context = data.sf.gov only</code>	273
<code>search_context = data.sfgov.org only</code>	273
<code>domains = data.sf.gov only</code>	2
<code>domains = data.sfgov.org only</code>	2

Table 3: By publishing department and by type. ‘Stale’ is not updated in the 2 years before retrieval; ‘rows’ sums `count(*)` over the tabular assets. Departments with fewer than three assets are pooled.

Department	Assets	Datasets	Maps	Other	Stale	Rows
Planning	158	85	59	14	125	6,257,779
Municipal Transportation Agency	15	9	4	2	12	22,693
Building Inspection	14	1	2	11	0	13,511,840
Office of Resilience and Capital Planning	14	12	1	1	13	4,061
(departments with fewer than three)	12	9	2	1	6	4,248,182
Public Works	11	9	2	0	0	1,450,981
GSA - City Administrator’s Office	8	5	2	1	6	239,131
Environment	7	4	1	2	1	68,269
(not stated)	6	2	3	1	5	4,330
Controller	5	5	0	0	1	1,599,129
Technology	5	3	1	1	2	474,211
Human Resources	4	4	0	0	1	49,495
Ethics Commission	4	3	0	1	0	2,049
Mayor	4	3	1	0	0	2,043
Health Service System	3	0	0	3	1	2,003
DataSF	3	1	0	2	1	225,722

Table 4: By the catalogue’s own category.

Category	Assets	of which datasets
(none)	85	43
COVID-19	2	1
City Infrastructure	21	15
City Management and Ethics	14	12
Culture and Recreation	6	3
Economy and Community	11	4
Energy and Environment	15	9
Geographic Locations and Boundaries	46	27
Health and Social Services	8	5
Housing and Buildings	39	18
Public Safety	10	9
Transportation	16	9

Table 5: Flagged *core* or *possibly useful* and not already cached. The flag and the reason are judgement.

Asset	Identifier	Rows	Keys (by name)	Why
Building Permit Addenda with Routing (<i>core</i>)	87xy-gk8d	3,998,159	permit, date	Station-by-station permit routing with dates, including Planning’s review stations: the permit clock decomposed.
Planning Department Project Application Review metrics (<i>core</i>)	d4jk-jw33	67,265	case/record, date	Record-level Planning review-time metrics keyed on the Accela record number: the delay the paper measures, from the department’s own clock.
Building Permit Application Issuance Metrics (<i>possibly useful</i>)	gzxm-jz5j	148,951	block+lot, permit, date	DBI’s own filing-to-issuance and review-step metrics by permit; a check on the permit clock.
Building Permit Application Review Metrics (<i>possibly useful</i>)	5bat-azvb	453,703	block+lot, permit, date	DBI’s own filing-to-issuance and review-step metrics by permit; a check on the permit clock.
Building Permits Deduplicated on Primary Address (<i>possibly useful</i>)	f2jc-ivnc	1,149,358	block+lot, case/record, permit, date	DBI’s own deduplication on primary address; a check on the earliest-filed collapse rule.
Building Permits with Contractor, Subcontractor, Architect, Designer, or Engineer (<i>possibly useful</i>)	cw8k-gwb7	853,025	permit, date	Permits with their architects, engineers and expeditors: the repeat players in the permit market.
Building Permits with Permit Contacts (<i>possibly useful</i>)	9itm-3rmi	1,725,431	block+lot, case/record, permit, date	Permits with their architects, engineers and expeditors: the repeat players in the permit market.
Dataset inventory (<i>possibly useful</i>)	y8fp-fbf5	1,336	date	The city’s inventory of candidate datasets, published or not: where an unpublished Commission-actions table would appear.

Asset	Identifier	Rows	Keys (by name)	Why
Datasets in 'Scoping' or 'In Progress' phase <i>(possibly useful)</i>	xu9j-dnfu	64	date	The city's inventory of candidate datasets, published or not: where an unpublished Commission-actions table would appear.
Land Use with Active Parcel Information <i>(possibly useful)</i>	h5vv-2u24	224,322	blklot	The 2023 land use pre-joined to active parcels.
SFEC Form 3410A - Registration Report for Permit Consultants <i>(possibly useful)</i>	umwe-sn9p	170	date	Registered permit consultants and their filings: who is paid to move permits.
SFEC Form 3410B - Quarterly Report for Permit Consultants Filings <i>(possibly useful)</i>	k2rm-926a	1,531	date	Registered permit consultants and their filings: who is paid to move permits.
SFEC Form 3500 - Disclosure Report for Developers <i>(possibly useful)</i>	bk74-rima	174	case/ record, date	Disclosures by developers of major projects, keyed on the planning case number: the political economy of large entitlements.
SFEC Form 3500 - Disclosure Report for Developers of Major City Projects Filings <i>(possibly useful)</i>	8je3-gv3q	174	case/ record, date	Disclosures by developers of major projects, keyed on the planning case number: the political economy of large entitlements.
108" Inundation Vulnerability Zone Line (Sea Level Rise + 100YR Flood Event) <i>(possibly useful)</i>	92e4-7ptg	1,005		A sea-level-rise or climate overlay: a long-run cost shifter; check against demand_estimation first.
Parcels with overlay attributes <i>(possibly useful)</i>	9grn-xjpx	236,556	blklot, block+lot, date	Every parcel with its current overlays pre-joined; a cross-check on the spatial join.

Asset	Identifier	Rows	Keys (by name)	Why
Mayor's Office of Housing and Community Development Affordable Housing Portfolio <i>(possibly useful)</i>	pyxv-n29e	850	date	How projects met the inclusionary requirement, and the affordable portfolio, with case or permit numbers.
Mayor's Office of Housing and Community Development Non-Unit Inclusionary Housing Alternatives <i>(possibly useful)</i>	g6kh-9pnv	153	case/ record, permit, date	How projects met the inclusionary requirement, and the affordable portfolio, with case or permit numbers.
100-Year Storm + 24" Sea Level Rise <i>(possibly useful)</i>	esku-ejgv	7		A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
100-Year Storm Flood Risk Zone (July 2022) <i>(possibly useful)</i>	jzu3-4yxp	1	date	A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
100-year storm + 66 inches Sea Level Rise <i>(possibly useful)</i>	6ann-usi8	1		A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
Dam or Reservoir Failure Hazard Zone <i>(possibly useful)</i>	7crf-46s6	7	date	A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
FEMA FIRM Flood Hazards (Coastal) - 2021 Update <i>(possibly useful)</i>	jyce-e25k	222		A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
HAQR Priority Green Infrastructure Zones <i>(possibly useful)</i>	nn26-kuy2	1		A sea-level-rise or climate overlay: a long-run cost shifter; check against demand_estimation first.

Asset	Identifier	Rows	Keys (by name)	Why
Hayward M7.0 Earthquake Scenario (<i>possibly useful</i>)	d6pi-gknj	26	date	A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
Landslide Susceptibility Hazard Zones (<i>possibly useful</i>)	bn4-itif	8	date	A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
San Andreas M7.8 Earthquake Scenario (<i>possibly useful</i>)	akmp-ztcg	27	date	A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
Soil Liquefaction Hazard Zone (<i>possibly useful</i>)	i4t7-35u3	2		A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
Tsunami Inundation Hazard Zone (2021 Update) (<i>possibly useful</i>)	7p2k-c3z6	1		A physical-hazard zone: a construction-cost shifter; check against demand_estimation's hazard layers first.
Building Permit Completeness Check Review Metrics (<i>possibly useful</i>)	abh5-gwaq	6,618	date	DBI's own filing-to-issuance and review-step metrics by permit; a check on the permit clock.
PermitSF Permitting Data (<i>possibly useful</i>)	tyz3-vt28	4,999	blklot, case/record, date	PermitSF submission-to-issuance times with record numbers and parcels; recent and small.
AHBP_eligible_parcels (<i>possibly useful</i>)	fizh-zaxt	30,431	blklot	Parcels eligible for the Affordable Housing Bonus Program: a dated policy treatment by parcel.
AHBP_zoning_districts (<i>possibly useful</i>)	y5fw-t3z4	736		The zoning districts behind the Affordable Housing Bonus Program eligibility.
Air Pollutant Exposure Zone (<i>possibly useful</i>)	t65d-x6p8	1		An overlay that triggers extra review (air-quality exposure, steep slope).
Analysis Neighborhoods (<i>possibly useful</i>)	j2bu-swwd	41		Analysis neighbourhoods and their tract crosswalk: the geography the permit comparison uses.

Asset	Identifier	Rows	Keys (by name)	Why
Analysis Neighborhoods - 2010 census tracts assigned to neighborhoods <i>(possibly useful)</i>	m46u-xzix	195		Analysis neighbourhoods and their tract crosswalk: the geography the permit comparison uses.
Analysis Neighborhoods - 2020 census tracts assigned to neighborhoods <i>(possibly useful)</i>	sevw-6tgi	242	date	Analysis neighbourhoods and their tract crosswalk: the geography the permit comparison uses.
Article 11 Rating <i>(possibly useful)</i>	ejht-vp5d	786	case/ record, date	A historic designation that brings a project before a commission; overlaps the parcel-keyed historic status already listed.
Article 11 Ratings <i>(possibly useful)</i>	6m3x-8fu4	786	blklot	Historic status by parcel or district: a regulatory constraint that triggers review.
Cultural Districts <i>(possibly useful)</i>	5xmc-5bjj	10	date	Cultural districts: a geography used in land-use controls since 2018.
Downtown Plan Monitoring Report 2012 <i>(possibly useful)</i>	7d7s-7cc6	—		Downtown Plan monitoring: office-space totals behind the office-allocation docket.
Downtown Plan Monitoring Report 2012 <i>(possibly useful)</i>	eh2b-k988	—		Downtown Plan monitoring: office-space totals behind the office-allocation docket.
Downtown Plan Monitoring Report 2013 <i>(possibly useful)</i>	fhn6-zx2j	—		Downtown Plan monitoring: office-space totals behind the office-allocation docket.
Existing Commercial Wireless Telecommunication Services Facilities in San Francisco <i>(possibly useful)</i>	aa26-h926	883	block+lot	Wireless facilities: wireless conditional uses are a large share of the CU docket.
Historic Context Statements <i>(possibly useful)</i>	43um-8u7u	5,503	blklot	Parcels covered by adopted historic context statements: a review trigger by parcel.

Asset	Identifier	Rows	Keys (by name)	Why
Historic Districts (possibly useful)	63x5-g3m4	204	date	Historic status by parcel or district: a regulatory constraint that triggers review.
Historic Resource Status by Parcel (possibly useful)	3tsw-4idn	163,278	blklot, date	Historic status by parcel or district: a regulatory constraint that triggers review.
Historic Special Use Districts - 2010 (possibly useful)	6a3d-758c	79		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Special Use Districts - 2011 (possibly useful)	8vnp-htwm	106		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Special Use Districts - 2012 (possibly useful)	ff5j-uv3a	148		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Special Use Districts - 2014 (possibly useful)	b6kc-439r	150		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Special Use Districts - 2015 (possibly useful)	y7mn-8sik	146		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Special Use Districts -2013 (possibly useful)	hbc8-ncn7	147		A dated special-use district vintage; the zoning panel carries only the current SUD layer.
Historic Zoning Maps (possibly useful)	ekvb-kch8	—		Scanned zoning maps from 1921 onward: the only pre-1998 zoning on the portal, as images.
Housing Balance March 2016 (possibly useful)	8iri-b2sz	2,637	blklot, date	The 2016 housing balance snapshot by parcel: units added and lost, once.
Housing Sustainability Districts (possibly useful)	7way-43xh	1,678		Housing Sustainability Districts: by-right approval geography, the ministerial counterfactual.

Asset	Identifier	Rows	Keys (by name)	Why
Landmark Districts (<i>possibly useful</i>)	knm6-5ej6	20	case/record, date	A historic designation that brings a project before a commission; overlaps the parcel-keyed historic status already listed.
Landmarks (<i>possibly useful</i>)	rzic-39gi	362		A historic designation that brings a project before a commission; overlaps the parcel-keyed historic status already listed.
Landmarks Listed in Article 10 of the San Francisco Planning Code (<i>possibly useful</i>)	97yj-54sx	370	blklot	Historic status by parcel or district: a regulatory constraint that triggers review.
Maher (<i>possibly useful</i>)	v5ic-hjgw	974		Sites subject to the Maher ordinance (contamination): a construction-cost shifter by site.
National Register Historic Districts (<i>possibly useful</i>)	4yr8-u35c	60	date	A historic designation that brings a project before a commission; overlaps the parcel-keyed historic status already listed.
Neighborhood Quadrants (<i>possibly useful</i>)	6dn4-si7z	4		A Planning Department administrative geography (district, area, team boundary), useful only as a grouping.
Planning Areas (<i>possibly useful</i>)	bkzf-eahq	72		A Planning Department administrative geography (district, area, team boundary), useful only as a grouping.
Planning Department's Current Planning Team Boundaries (<i>possibly useful</i>)	ujhp-tya6	7		A Planning Department administrative geography (district, area, team boundary), useful only as a grouping.
Planning Districts (<i>possibly useful</i>)	kyw5-5shs	17		A Planning Department administrative geography (district, area, team boundary), useful only as a grouping.

Asset	Identifier	Rows	Keys (by name)	Why
Planning Neighborhood Groups Map <i>(possibly useful)</i>	mw29-m2za	37		Neighbourhood-group notification boundaries: the geography of who is noticed.
Priority Development Areas <i>(possibly useful)</i>	k5ee-yrip	16		Priority Development Areas: a regional policy geography.
Privately Owned Public Open Spaces <i>(possibly useful)</i>	65ik-7wqd	81	block+lot	An obligation commonly imposed as a condition (open space, public art): a cross-check on condition content.
Proposed Commercial Wireless Telecommunication Services Facilities in San Francisco <i>(possibly useful)</i>	ewnu-9y3h	117	block+lot	Wireless facilities: wireless conditional uses are a large share of the CU docket.
Public Art (from 1% Art Program) <i>(possibly useful)</i>	cf6e-9e4j	65		An obligation commonly imposed as a condition (open space, public art): a cross-check on condition content.
SF Find Neighborhoods <i>(possibly useful)</i>	gfpk-269f	117		A Planning Department administrative geography (district, area, team boundary), useful only as a grouping.
San Francisco Environmental Justice Communities Map <i>(possibly useful)</i>	y6ci-vpnb	2,702		Environmental-justice communities: a policy geography used in review.
San Francisco Land Use 2023 (No Geom) <i>(possibly useful)</i>	qbf8-heuf	154,476	blklot	An archived land-use vintage; with the current layer it makes a land-use panel.
San Francisco Open Space for Shadow Study Analysis <i>(possibly useful)</i>	xk8z-bcqz	—		Open-space boundaries used in shadow studies: shadow is a recurring ground for discretionary review.

Asset	Identifier	Rows	Keys (by name)	Why
San Francisco Property Information Map <i>(possibly useful)</i>	i8ew-h6z7	—		A link to the Property Information Map, the per-parcel case and permit history; not a dataset.
Slopes 20 Percent Or Greater <i>(possibly useful)</i>	s66h-h4vp	28,055	date	An overlay that triggers extra review (air-quality exposure, steep slope).
Zoning Map - Special Use Districts <i>(possibly useful)</i>	5yf5-ms5f	145		A newer publication of the special-use district layer than the cached rxfc-8aap.
Zoning Map - Zoning Districts <i>(possibly useful)</i>	3i4a-hu95	10,617		A newer publication of the current zoning layer (updated at retrieval; the cached xzez-p3nc was last updated 2024-02-23) — the panel’s carried-forward snapshot should be checked against it.
[ARCHIVED] San Francisco Land Use - 2020 <i>(possibly useful)</i>	ygi5-84iq	155,395	blklot, block+lot	An archived land-use vintage; with the current layer it makes a land-use panel.
[ARCHIVED] San Francisco Land Use - 2023 <i>(possibly useful)</i>	fdfd-xptc	154,476	blklot	An archived land-use vintage; with the current layer it makes a land-use panel.
City Lands <i>(possibly useful)</i>	gtnh-hgvs	1,035	date	City-owned land: a cross-check on the risk set’s public-land restriction.
San Francisco ZIP Codes <i>(possibly useful)</i>	uq3t-6t53	32		ZIP code areas: the parcel-to-ZIP step the Zillow indices need.

Table 6: Stale: not updated in the 2 years before retrieval, oldest first.

Table 8: Negative results. A row here is a search that was run and is not to be run again.

Sought	Where	Result
A dataset of Commission actions, motions or conditions	all 273 catalogue results; Planning’s 109 entries in the dataset inventory, published or not	none; the inventory entry that use the words: Privately Owned Public Open Spaces
The catalogue by the old host name	<code>search_context</code> or <code>domains = data.sfgov.org</code>	273 with <code>search_context</code> , the same assets as the new host; 2 with <code>domains</code> alone, as for the new host — not zero
Every result, by paging the default order	the Discovery API, relevance order	273 rows holding 261 distinct assets; page in <code>order=dataset_id</code>
Planning permitting data	<code>kncr-c6jw</code> [Deprecated]	0 rows; its description names the two records tables, both cached, as its replacement
Historic resources	<code>njrt-gtwr</code> [Deprecated]	0 rows; its description names <code>3tsw-4idn</code> as its replacement
Extra zoning vintages	<code>5uzm-v8n8</code> (March 2005), <code>cfhj-8c6b</code> (April 2000)	196,344 and 153,292 rows, the row counts of the cached 2005 and 2000 vintages (196,344, 153,292); probably duplicates; compared on row count only
A published history of the Development Pipeline	the dataset inventory	4 quarterly snapshots are listed as held and not published

Table 9: What the Planning Department lists in the city’s dataset inventory (y8fp-fbf5) and has not published. Descriptions are the inventory’s own, cut to their first sentence or so.

Inventory	Status	Dataset	What the inventory says
CPC-0020	In Progress	Parcels with Active Planning Complaints (for OpenGov)	nan
CPC-0021	In Progress	Addresses in SF Port Jurisdiction (for OpenGov)	nan
CPC-0182	In Progress	San Francisco Environmental Justice Communities Map	The Environmental Justice Communities Map (“EJ Communities Map”) describes areas of San Francisco that have higher pollution and are predominately low-income. This map is. . .

Two ways the catalogue gives a wrong answer without an error.

- **Paging the default order drops assets.** Results come back in relevance order, and a relevance-ranked list re-ranks between requests: paged to exhaustion that way, the query returned 273 rows holding 261 distinct assets — some twice, some never. Ordered by identifier (`order=dataset_id`) it returns every asset once. Everything in this memo was paged that way.
- **Which parameter names the host matters more than which host is named.** Table 2 runs the same query six ways. Passed as `search_context`, the old host `data.sfgov.org` returns 273 results — the same assets as the new host. Passed as `domains` alone, the new host returns 2 and the old 2. The data-acquisition memo’s finding that “a catalogue search against the old host returns zero hits” did not reproduce on 2026-09-11; whether the catalogue has changed since that memo’s run or the earlier test passed the host differently is not known, and that memo now carries a dated note saying so.

2 What each asset carries

For each of the 273 assets the catalogue record and the view’s own metadata give its identifier, name, type, parent dataset where it is a derived view, publishing department, category, tags, creation and last-update dates, stated update frequency, column names and types, and the first part of its description; `SELECT count(*)` against the resource endpoint gives its row count. 255 assets have rows of their own, together 28,161,918 of them; the rest are links, stories, files and a chart. 130 carry a geometry column. All of this is in `catalogue_planning.csv` (§6).

Join keys, by name. A column name is a claim about the rows, not proof of what they hold, and the table marks keys “by name” for that reason. 61 assets carry at least one of the pipeline’s keys: 34 a `blklot`-style parcel identifier, 30 separate block and lot columns, 18 a planning case or record number, 20 a permit number. The name-matching has one known false friend: DBI’s `record_id` is DBI’s own row identifier, not a Planning record, and it makes every view of DBI’s permits look as though it carries a case number.

Departments and categories. Table 3 gives the 23 publishers. The Planning Department publishes 158 of the 273; the rest matched on the word “planning” somewhere in their text — capital planning, transport planning, workforce planning — and include salary schedules, pension payments

and police incident reports. Table 4 gives the portal’s own categories, which are unassigned on a large share of assets and are not a useful filter.

Staleness. 174 assets have not been updated in the 2 years before retrieval (Table 6). For most of them that is by design — a 2009 zoning vintage is not meant to change — and staleness is a problem only for the assets that claim to be current.

3 Relevance, and what is already cached

Each asset carries a flag — *core*, *possibly useful* or *not relevant* — and a one-sentence reason. **The flags are judgement, not measurement:** they were written by hand, after reading every asset’s name, description and columns, into `relevance.csv` beside this memo, and the script only reads them. 35 assets are flagged core, 83 possibly useful and 155 not relevant. 36 of the 273 are already cached by `acquire_external_data.py` or `analyze_permits.py`, and are marked with a dagger in Table 7; the check is against the identifiers those scripts fetch, which include every source in Table 1 of the data-acquisition memo that the catalogue returns for this query.

Table 5 lists the 82 assets flagged core or possibly useful that are not cached. In rough order of what they would add:

1. **The delay the paper measures, from the city’s own clocks.** The Planning Department’s *Project Application Review metrics* (d4jk-jw33) give review-time events per application, keyed on `b1.alt_id`, which is the Accela record number and joins to the item table’s case number the way the records tables do. DBI’s *Building Permit Addenda with Routing* (87xy-gk8d) dates every review station a permit passes through, Planning’s included. Neither has been measured against anything in this pipeline, and both bear directly on the delay memo and on the permit clock.
2. **Newer publications of cached layers.** A *Zoning Map — Zoning Districts* (3i4a-hu95) updated at retrieval sits beside the cached `xzez-p3nc`, which is in the stale list of Table 6; the same is true of the special-use districts. The zoning panel carries the current layer forward from 2016, so the layer it carries should be checked against the newer one before the panel is used for recent years.
3. **Vintages the panel lacks.** The dated special-use district layers of 2010–2015, archived land-use vintages, and a set of scanned zoning maps from 1921 onward — the only pre-1998 zoning the portal holds, and only as images.
4. **Policy geographies and review triggers by parcel:** Affordable Housing Bonus eligibility, Housing Sustainability Districts, historic status, the Maher contamination sites, steep slopes and the air-quality exposure zone.
5. **The political economy of permits:** developer disclosures for major projects keyed on the planning case number, registered permit consultants and their filings, and the architects and expeditors on each permit.

What the city holds and has not published. The city’s dataset inventory lists what departments hold whether or not it is on the portal. The Planning Department has 109 entries in it, 89 published and 20 not; Table 9 lists the unpublished ones. Worth a records request among them: an event-level extract of the department’s project review (the inventory’s *Planning Department*

Project Review Events), a record-to-parcel crosswalk, and 4 quarterly snapshots of the Development Pipeline held internally — which is the pipeline *panel* the data-acquisition memo reported as unavailable because the published pipeline is a current snapshot.

4 Negatives

Table 8 records what looked promising and was not, so the searches are not repeated. The first row is the one the project cares about: **no asset in the catalogue and no entry in the Planning Department’s inventory is a record of Commission actions, motions or conditions**. The table names the inventory entries that use those words (1); read in full, none is a record of what the Commission decided.

5 Established, and not established

Established.

1. The catalogue returns 273 assets for “planning” on 2026-09-11; the web figure of 155 matches the API’s 155 datasets, and the remainder is reconciled by type in Table 1.
2. Relevance-ordered paging is not exhaustive; identifier-ordered paging is.
3. The old host name works as `search_context`; `domains` alone does not work for either host.
4. No Commission-actions dataset exists on the portal or in Planning’s inventory.
5. 82 uncached assets are judged core or possibly useful, led by two review-time datasets and newer copies of two cached zoning layers.

Not established.

1. Whether the web UI’s 155 is a datasets count. It matches, and the page could not be rendered here to confirm it.
2. Whether the old-host result changed since the data-acquisition memo’s run.
3. What any uncached asset actually joins to. The keys are read from column names; no join rate is measured here, and by this project’s rule nothing in Table 5 is “found” until one is.
4. Whether the two zoning layers differ in substance. They differ in size and date; the polygons have not been compared.
5. The relevance flags, which are one reader’s judgement.

6 Reproducing this

```
python analyze_datasf_catalogue.py fetch      # catalogue, host test, inventory,
                                              # one view + count(*) per asset
python analyze_datasf_catalogue.py fetch --refresh  # re-query the catalogue
python analyze_datasf_catalogue.py report        # CSV, tables, macros
```

`fetch` writes the raw catalogue answer, with its retrieval timestamp, the host test, the per-type facet counts and a relevance-order paging pass, to `$MFHR_DATA_ROOT/external/datasf_catalogue/catalogue_planning_<date>.json`; one enrichment file per asset to `enrich/`; and Planning's rows of the dataset inventory to `inventory_planning.json`. It pauses between requests to stay under two a second on each host. `report` writes `catalogue_planning.csv` (one row per asset, every field above plus the flag and the columns the key match found) and the two generated files this memo inputs. The relevance flags are the one hand-written input, in `relevance.csv` beside this file; every number in the text is a macro.
